Student Project

Social Project, Mathematics appears in every field. Therefore, it is an important branch of science that should be learned in our schools. Because of this feature, mathematics lessons begin to be taught to children starting from their pre-school period. In this education process, visually, auditory and mentally disabled students who need special education are also included. This issue is given great importance in Turkey. Because in our country there is a belief that every individual has the right to education. There are schools for our visually, auditory and mentally disabled students and a special education teacher program to work in these schools. Our students are educated with great care and patience by our teachers trained in the special education teaching program. In order to guide our teachers, very serious and long-term program development groups, who are experts in various subjects, carry out the necessary studies for the mathematics course curriculum. Education and training are provided in our schools in line with these programs. We, the members of Atatürk University, believe that education is a birthright and a very important concept that everyone can access. For this reason, it is thought that the importance of exchanging information with these schools is great., Ataturk University, Kâzım Karabekir Eğitim Fakültesi, Matematik ve Fen Bilimleri Eğitimi, Turkey, 2023 - 2023
